Eaton preserves uptime for Synology storage and backup servers

Offering a robust, integrated power management solution that safeguards network/storage devices and backup servers, Eaton® provides Synology customers with the assurance of continuous uptime and business continuity. Lab-tested for seamless interoperability, our award-winning, best-of-breed uninterruptible power systems (UPSs) and Intelligent Power Manager (IPM) software are designed to facilitate scaling up flexible storage solutions while scaling down IT efforts – making it easy for administrators to monitor and manage the entire environment.

Unique advantages afforded by the Eaton/Synology solution

In addition to the convenience of purchasing a complete, compatible solution from a single provider, the combined offering is available at an attractive price point. Key benefits include:

- ✔ Increased business continuity
- ✔ Improved disaster recovery
- ✔ Prevention of data loss
- ✔ Remote monitoring and management
- ✔ Auto-detection of Synology devices

Eaton products support best practices for powering Synology storage and server backup solutions, with:

- ✔ Continuous clean power for data-intensive equipment
- ✔ Battery runtime of at least 30 minutes
- ✔ Remote power monitoring and management through IPM
- ✔ Improved uptime and efficiency through power distribution units (PDUs)
- ✔ Gigabit Network Card for built-in cybersecurity benefits
- ✔ Ability to secure critical devices with rack enclosures and TANlock modular access control system

Synology®

Eaton provides Synology with a variety of key differentiators, including:

✔ Award-winning power solution portfolio with industry-leading, 3-year warranty

✔ First UL-2900-1 & IEC 62442-4-2 certified communication card to protect data from cybersecurity breaches

✔ Remote monitoring and management of power infrastructure

✔ Complimentary on-site power assessments provided by Eaton

Protect, organize and manage Synology solutions

Eaton products support an extensive range of Synology solutions, including Active Backup for Business, high availability virtualization storage, unified backup for VMs, PCs, servers or SaaS, centralized storage and monitoring for surveillance. As a result, Eaton products help customers achieve their disaster recovery goals through operational uptime, data integrity and enhanced cybersecurity protection, even in virtual environments. The combined backup solution of Eaton UPSs, PDUs and Intelligent Power Manager (IPM) software provide businesses with the comprehensive tools needed to ensure high availability and security of surveillance equipment.

Ensuring high availability with Synology and Eaton

SYNOLOGY

VMware host

③ Cloud Backup

DS720+

① High-availability storage   ② Local backup   ③ Off-site backup

EATON

9PX1000RT UPS + 9PXEBM48RT

Online battery backup with external battery module for extended runtime

5P1000RC UPS

Shorter depth for reduced footprint, added outlets for increased flexibility

5P1500R-L

Lithium-ion battery powered UPS for long service life

5S550

Energy efficient desktop UPS
